ATHENA ACADEMY · LIVE ONLINE LEARNING

AZ-900 · Microsoft Azure Fundamentals

Understand cloud decisions, core Azure services and the tools used to govern, secure and operate an environment.

We work with Microsoft Learn, live online classes and guided activities. The eight-session plan connects the current exam objectives with practical scenarios.

USD 500	24 h	4 h + 30 min
Final price per person, per course. Applicable taxes and one exam attempt included. The same total applies to every payment method.	24 hours of live online classes	4 hours of guided activities + One private 30-minute consultation

November 2026 cohort | November 21, 2026 - January 23, 2027

Live class time: 17:00-20:00 UTC-06:00 | Live online classes

This cohort is taught in Spanish. English and Portuguese pages and guides are translations of the same cohort. Confirm any access requirements before enrolling.

No class on December 26, 2026 or January 2, 2027.

All live sessions use the fixed UTC–06:00 offset. Check the equivalent time in your location before enrolling.

One Pearson VUE attempt at the course's Microsoft certification exam

Who this course is for

For people beginning with Azure who want a structured foundation for cloud work and further technical study.

Before you join

General computing and IT familiarity are useful. No scripting experience is required; exercises introduce the Azure portal and relevant tools.

What you will work on

- Explain cloud concepts, shared responsibility and service models.
- Recognize Azure architecture, compute, networking, storage and identity services.
- Describe cost management, governance, resource deployment and monitoring.
- Compare service choices through practical scenarios and exam preparation.

Payment and enrollment questions

Cash and bank transfer are available. Ask about enrollment instructions and the applicable payment arrangements before paying.

BAC Tasa Cero and Credix payment plans are available in 3 or 6 monthly installments, subject to participating cards, issuer conditions, availability and approval. Approval is not guaranteed.

One Pearson VUE exam attempt is included; retakes are not included. Before enrolling, confirm exam eligibility, booking region, language, scheduling availability and the conditions of that attempt. Certification is awarded by Microsoft after its requirements are met.

AZ-900 | Your eight-session learning plan

17:00-20:00 UTC-06:00 | No class on December 26, 2026 or January 2, 2027.

01 **2026-11-21**	**Cloud concepts and service models** Compare public, private and hybrid cloud, consumption-based pricing, shared responsibility and IaaS, PaaS and SaaS. **Guided practice:** Choose a service model for a sample business requirement and explain the tradeoffs.
02 **2026-11-28**	**Azure architecture and resource organization** Explore regions, availability zones, subscriptions, management groups and resource groups. **Guided practice:** Read an example Azure resource hierarchy and locate resources in the portal.
03 **2026-12-05**	**Compute and application hosting** Compare virtual machines, containers, functions and application hosting options, including App Service. **Guided practice:** Select a compute option for several workload scenarios.
04 **2026-12-12**	**Networking and connectivity** Explore virtual networks, subnets, DNS, public and private endpoints and connectivity options. **Guided practice:** Trace an application connection and identify the role of each network component.
05 **2026-12-19**	**Storage, access and data movement** Compare storage services, access tiers, redundancy and options for moving data into Azure. **Guided practice:** Match a storage choice and data-transfer approach to a stated requirement.
06 **2027-01-09**	**Identity, access and security** Describe Microsoft Entra ID, authentication, authorization, RBAC, Zero Trust and defense-in-depth. **Guided practice:** Distinguish identity, resource permissions and network controls in a sample design.
07 **2027-01-16**	**Costs, governance and deployment tools** Explore Cost Management, tags, Policy, locks, Purview, Azure Arc and infrastructure deployment with ARM and command-line tools. **Guided practice:** Review an example budget and identify governance controls for a small environment.
08 **2027-01-23**	**Monitoring and exam preparation** Connect Azure Monitor, Log Analytics, Application Insights, Advisor and Service Health to operational scenarios. Review all exam domains. **Guided practice:** Interpret an operational scenario and complete an original knowledge check.
